

## E-Vars

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Server Side Information displayed in a browser. Know your server. Need to find your path to sendmail? Perl version, all available modules with a link to CPAN, operating system or environmental variables used and returned by your server? This free script will do all that and more. Simply upload, chmod then view all of the above information. Script searches all common sendmail locations looking for matches. Best of all, it's free!
