

Easy Website Password Protection Tutorial

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

You can now implement password-protected pages without Telnet access to protected directories in your web site. Then you can use these password protected directories to sell downloadable products or provide premium access to members. In this password protection tutorial, we will explain how to create access authorization using only FTP. This will be helpful to most webmasters who want to create authentication files but who do not have Telnet. Unfortunately, most of the restricted access tutorials assume that the webmaster can use Telnet, which of course, is not true. Now you can sell your software, documents, images or music online. You can easily protect files and directories that require the use of a username and password, and you don't have to be a computer programmer to do it!
