Easylinks is a Links4all script. You can use it to create links of the day pages or shared bookmarks of you and your friends. Easylinks displays the links in predefined categories. Users can select categories from a dropdown menu or via textlinks. Each category has an "add your link" button which allows adding new links. Users can select between a brief display (just link names) or a display with details. The owner is able to define the displayed navigational segments. Includes a password protected admin section to alter and delete the links that were entered.
