

EasyMail.Net BounceBuster

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

EasyMail.Net BounceBuster is a .Net component that will enable your .Net application to easily process and categorize bounced email messages. The information provided by BounceBuster can be used to update email address lists, create delivery reports and more. Supports 1000's of different bounce and NDR formats and provides access to every part of the returned message including the email address that failed and the reason why. The bounce definition file can be easily downloaded as new bounce formats emerge or can be extended with your own custom bounce types. High performance, 100% pure .Net code. Free trial. Quiksoft Corporation.
