

EasyMail.Net Verify

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

EasyMail.Net Verify is a .Net component that will enable your .Net application to easily and accurately verify email addresses. Automatic multilevel validation can verify addresses based on syntax, white lists, black lists, DNS lookups and even two types of connections to the recipient's SMTP mail server. Bulk verification option provides lightening fast multithreaded verification of email addresses contained in DataSet, DataTable, DataReader or IList objects with only one line of code. The easy to use component also provides DNS MX lookup services to your application.
