Email	{value_email}

This poll script has been written with ease of use in mind - it consists only of 2 files. Upload these to your server, access the setup file through your browser and fill in a form. That's it! With no database required, the script uses ip tracking and cookies to prevent multiple voting (if you so wish), along with the option to make results visible using a bar chart, email when someone votes, and fully customise the look of the poll. It has been designed to be used on it's own, or within another page - with full instructions.
