EConExplorer is a browser-based application that can run on any platform (Linux, Unix, and Windows) using any JSP/J2EE container, and accessed using any web browser. It offers a P2P content network to author, manage, and distribute dynamic content from many resources such as: Legacy Systems, databases, portals, application servers, mainframes, and file-sharing systems. Any information stored in these systems such as data, documents, and media files are securely made available to end-users.
