Email Builder: Server-based software that allows you to send permission-based email messages, and measure and track the results. Create unlimited lists, send unlimited amounts of messages with no monthly fees -- the software resides on your server. You can easily upload lists, view / edit users, use an online HTML editor to create dazzling newsletters and messages, view past campaigns and more. Schedule email campaigns in advance, track bounced messages and unsubscribes -- all via the server. The included real-time campaign tracking system (CP-Report, also available separately) allows you view the performance of email campaigns over time, and perform detailed statistical analysis, including real-time sales tracking. Developed for our Fortune 500 clients, made available to the masses.
