

EmailAuth

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This script will allow Perl programs running on an NT server to send email through SMTP to a server that requests authentication. If your email server does not require you to authenticate then you don't need this script, but if it does this is one of the only scripts out there that does it.
