Encryp-Card

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is a generic program for taking credit cards on-line and having the customer information emailed to you. The card number is encripted using an algorythm. You supply a personal 10 digit code that is used in the algorythm for a truely unique, secure, and personal encription of the customer card number. The card number is de-crypted with a Windows® program, included in this package. This program is fully compatible with SSL, and can be used with a secure server.
