<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

ennyForms is a versatile FREE-to-use Feedback Form or Mail Form type script that should handle most mail form needs. ennyForms is designed to handle submitted information from almost any mail form without having to set up the script for each form, set up multiple templates, or include an abundance of hidden input values. All you have to do is design each form in your html editor, and when finished add a few characters to each Input-Tag name. The names become sorted labels in both an optional preview page, before sending, and the formatted text of your received mail - to one common, or form dependent, address. MySQL NOT required.
