Error System

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This set of scriptlets allows you to have both customised Apache error pages and the opportunity to be notified, by email, when an error occurs on your site. When site visitors arrive at an error page, they have the option of notifying you by selecting a single link on the generated error page. The system then sends you an automatically generated email with all of the relevant information you need to start tracking down any real errors - such as the urls of broken links etc.
