

# ErrorHandler

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

The way it works is providing several report formats of error catching: logging, display and redirection to a customizable error page. ErrorHandler captures the errors and captures (to a customized level) the context and variables surrounding the source of the error and neatly organizes them as a series of reports. It helps when developing new scripts and monitoring sites in production state, too. It helps when developing new scripts and monitoring sites in production state, too.
