phpWork is an event-driven(EDP), component-based web framework similar as architecture to ASP.NET. It is a tool, which will help you to build any php-based website in a very very easy, fast, reliable, safe and well-organized way. It comes with 40+ components, 70+ demos and many tutorials. The framework has very short learning curve, so anyone can start using it efficiently in less than 3 hours.
