ezContents is a Web site content management system in the form of a Drupal distribution. The default theme is fully responsive. Its features include maintaining menus, adding authors that write contents, permissions, workflow, and layout possibilities for the entire look of the site by simple use of settings. A @font-your-face module with Google Web Fonts is added by default. It offers great flexibility for the Web site developer and a user-friendly interface for the editor. You can extend it yourself using existing Drupal modules or themes.
