If you are a professional photographer or graphic artist, you need to present your portfolio in the most eye-catching and dynamic way possible. Using advanced Macromedia Flash technology, you can now do this! This Flash photo / image gallery allows extensive customization, so that you can make your portoflio look almost any way that you want, within certain layout constraints. This gallery includes some sleek, eye-catching special effects, and added many options for external configuration of the gallery. Just add your non-progressive JPG images to the appropriate directory, set the options in the configuration file, and then off you go! This gallery includes an XML configuration file which will allow you to adjust the layout of the gallery thumbnails relative to the main image, and change the colors of almost any part of the system. The 4 possible layouts can be previewed using the Demo links above. 2 of these layouts show the gallery in so-called "smooth scrolling" mode, whereby the thumbnails are displayed in a scrolling, single-column mode.
