

File and Directory explorer class

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

If you already worked with files and directories in PHP then you will know that the default copy, delete(unlink) functions are ok to use on files but when you want to delete or copy a directory with content in it, it's an whole other story. This class gives you the ability to easily delete, create, move, copy files and directories with content.
