

File to display paging

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This shows you how can display paging like google in your reports and also shows how you can use search, sorting etc with your reports and data very easily. You can find a zip file in download section to display paging on your reports etc. The paging file lib/paging.php is very useful file for displaying paging option on reports or on large number of data records. With this file you can display customized number of records on each page and number of paging per page. This file creates all the links for you, with paging option, with Next, Prev links. This file also creates the Link for FirstPage and Last Page Like [First Page] Prev < | 6 | 7 | 8 | 9 | 10 | > Next [Last Page] With this file you can easily provide easy search option, Sorting option and also you can provide an option to your user to select number of records they wish to view on page. With this script you can even learn PHP !! There is sample script with this which shows all the use of this file. Works only with MYSQL at this stage
