With File.Transfer's advanced features, such as drag-n-drop file and directory upload, client file deletion, application launch on file downloads, restart of interrupted downloads, download failure detection, and industry standard data compression, it's no wonder that companies like Associated Press , Xerox, Disney, and Pepsi chose Infomentum tools to aid their development efforts. File.Transfer is the professional's choice for leading edge upload/download capabilities that can't be found in any other file component. If you are looking for an intelligent way to exchange files between your ASP or ASP.NET application and web clients, the search is over. Compliant with RFC 1867, ActiveFile provides both file upload and download capabilities that work seamlessly with all of the leading web browsers. Your application can manipulate files and directories using a robust set of objects and methods provided by the File.Transfer component..
