Filedump is an extremely fast file upload/download tool. If you have your own server space and find yourself uploading temporary files for others (e.g. images), filedump can help keep track of your files securely. You can filter the filelist with the provided search box. Or, you can add a GET variable to search for files. For example, if you want to quickly show someone your favorite 3 vacation pictures, just upload them as vacation1.jpg, vacation2.jpg, and vacation3.jpg. Then, give them a link that looks like: http://yourdomain.tld/files/?vacation and they will receive a list of files containing the word "vacation". There is a simple administrative interface which allows you to upload a file (or create a new text file) and delete existing files. There's an unseen "adm" link at the top right corner of the screen; when you click it and enter your password, you will be brought to this interface.
