

# Filtering Data Islands

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This snippet demonstrates uses the "Singles Online" dating application to demonstrate some of most common functionality found in business applications. a) Filtering b) Sorting by column header (ascending or descending) and c) Highlighting the row as the mouse moves over it. As with my other "Redneck Employee" snippet, it uses a behavior .htc file to do the highlighting and column sorting. However, this snippet also demonstrates how to use XML/XSLT to filter the data data island in the page.
