Find Domains

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This mod will simply add a domain search field to your header or ezportal for your users to search and purchase available domains from your forums. It also provides a useful namespin function that creates a randomly generated domain that is available based on the keywords you enter. You can also look up additional information about domains as well. This would work on any page on your site that supports html.
