

Find in page script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This cross browser DHTML script simulates the Edit> Find In Page feature of the browser to allow your visitors to easily search for a particular text on your page. As in the "Find In Page" feature, it highlights the searched text if found, otherwise, prompts a "Not Found" message. Supports searching of both current page and a particular frame.
