FlashChart is the answer to your web enabled application's simple charting needs. It can transform a data of boring numbers into a nice looking chart. FlashChart generates two types of bar charts, a line chart, and a pie chart. It generates all the graphics in the client computer using Macromedia's Flash technology, taking the load off your servers and eliminating the use of DLL components or ActiveX contols. FlashChart includes an Active Server Pages interface (API) to produce dyanmic charts. ASP developers can turn their database data into cool charts in seconds. This API can also be easily ported into PHP, Perl or even to CGI programs.
