Email	{value_email}

Flesk.ViewStateOptimizer is a unique technology that overrides sending ViewState object to your client's browser! This means that your client's browser will no longer receive those large hidden field values, which thus reducing downloading time. Instead, Flesk.ViewStateOptimizer saves the page's Viewstate hidden field to a file, on the server side, speeding up processing time, downloading time and data. Combining Flesk.ViewStateOptimizer and Flesk.Accelerator, you can benefit from reducing downloading data and downloading time up to 30 times faster! No other components do the same or give the same results!
