

# Flex PHP Quote Form

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

You are Viewing My Flex Web Design Quote Form. This is Done in Pure MXML, and Features some quality validation. Its Not the Prettiest application, But its a Great way to get started with Flex & PHP. Features:  
1.) Uses All Flex Form Components to show how they operate. 2.) Per Field Validation (Can turn validation on for any field easily) 3.) Sends data to PHP for server side processing. 4.) Easy to Set Email Address, From Email, and any additional for Variables You may need. 5.) I have included a affiliateid parameter in the flash vars, and the form will post that Id as well, in case You already have an affiliate program. (Once You get the hang of this, You can build some pretty cool datadriven applications.) I have included a help File for simple setup, and have tried to comment my code as best as possible. Please contact me if you require any additional assistance, or have any questions Thanx Web Tech
