Flogin - User Authentication

Address   {value_address}

Contact Person   {value_contact_person}

Mobile Number   {value_mobile_number}

Email   {value_email}

Now Supports Multiple User Authentication. Flogin! is an ASP script which can control access to web pages. Just include flogin.asp in your page and the content after the include would be protected from unauthorized users. It is a simple ASP login script mainly to differentiate between an administrator and other users. It uses the Session Variable to restrict users to access pages which you wish to protect. The access username and password can be simply changed by editing the flogin.asp script variables "fUName" and "fPWord".
