FormMail Servlet

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This Java servlet allows you to email any html forms. It uses a text template file where you can set address of your smtp relay, smtp port, domain and describe contents of the letter. When you describe contents, you can also use values of form fields. Letter will be composed dynamically, when you submit form.
