

Forms To Go

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Forms To Go will create a PHP, Perl or ASP script for your HTML form to send the field values thru email. The script can validate for proper user input like valid email, lenght of characters, and more. Accept file uploads from your users. Enhanced script security to avoid abuse by spammers like captcha image filtering. New in version 4.0 is the ability to use the same HTML form as the landing page to show validation error messages in the same HTML form with the form values pre-filled.
