

Framed Click Through

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This example code shows how to place a frame around an external link from your site, similar to the method AskJeeves.com site uses. This enables a few things. Useful for displaying a banner ad and/or easy navigation back to your site. This example consists of three parts: linkto.htm, which contains links to a few websites in the convention necessary for the framed click through to work; frame-click.asp, which will track the referring page and the requested and open a frameset and the link being requested; and frame-navigation.asp, which writes out a link for the referring page (or home page when none is detected) and a link to remove the frame to view the target link.
