In lots of web store, there are pages for introducing your services, shipping, return product or reward point policy. And sometimes, it is difficult for customers to find them in menu navigation or footer link. They simply enter the keyword in search input field and look for the result. That is the case you hope they can find out it. Magento search only return products with keyword in product title and description. It can be failed sometimes if customers search by using product sku or manufacturer. Improving that feature, Free Text Search module will help your search work better and make the bigger chance for customers to find out what they are looking for. Instead of reloading the page and show search result in grid / list mode, Free Text Search module can return top results using Ajax by a popup below the search bar. It saves customers time for waiting and they can spend more time looking at products instead.
