

FTP Scheduler version 2.1.2 for Windows, MAC and other OS

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Automate your FTP tasks with this JAVA based FTP Scheduler. Create multiple upload or download sessions, proxy support (http, https, socks), session watchdog, FTP in ascii, binary, passive or active mode, overwrite, delete, log transfers, append files, backup files, receive errors by email and more! Very easy to use and the JAVA FTP Scheduler has been designed to provide a stable automated FTP solution. Should an upload or download fail a retry attempt will be made the next time the session is active. Network failures have no effect on the stability of the scheduler. The FTP Scheduler uses a minimum of resources and CPU cycles. A message window shows the activity of the FTP scheduler and provides information to the user concerning current activities, connection progress, retries, uptime and total amount of uploaded or downloaded files.
