

FuzzyRSS

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

FuzzyRSS is an ASP class that you can use to easily create RSS output that others can syndicate or view using a newsreader such as NewsGator or Bloglines. FuzzyRSS makes it so you don't actually have to deal with any RSS or XML yourself. Just set the properties, call the WriteRSS function, and you're done!
