Email	{value_email}

PHP 5 includes a powerful set of DOM manipulation classes that gives you full control over HTML and XML documents. This functionality behaves very similar to JavaScript's DOM manipulation engine. In this tutorial, we'll explore the DOMDocument class by generating an entire HTML5 page without writing a single bit of raw markup. This may not be practical for most applications, but it should give you a good idea of how the basic DOMDocument methods work.
