

Generating RSS with ASP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

RSS files can be generated using Active Server Pages (ASP). It is OK for an RSS file to have a .asp suffix. In this example an RSS 0.91 file is generated, but it could easily be applied to other RSS versions. Similarly in this case the site stores its articles in a Microsoft Access database, but the database connection could be changed to reflect a Microsoft SQL Server database.
