Geo Tag Cloud Magento Extension will automatically detect preferred users language basing on his browser local settings and translate all tags into users language. Tag clouds offer a quite interesting approach for site navigation. Since human beings tend to think in concepts and models, its easier to get an idea of presented content if the main concepts are given straight away in digestible pieces, and prioritized by their weight. In fact, the main advantage of tag clouds lies in their ability to highlight the most important or/and popular subjects dynamically which is not the case in conventional navigation menus. Geo Tag Cloud is a unique SMART Magento extension, which not only automatically translate all tags into local users language automatically but stores them smartly. Visitors from USA, UK will see tags on English, visitors from Germany in German, from Russia in Russian etc. ALL this is done automatically by this Geo Tag Cloud.
