GeoObjects offers an easy and affordable way to put maps in your application. GeoObjects enables applications to present numerical data more effectively. GeoObjects consists of a map OCX control and other OLE automation object controls for embedding spatial data access, display, and analysis capabilities into your Windows and Internet applications. It features a dynamic overlay layer, image support, new geometry objects, and added functionality. You can add vehicle tracking, feature level rendition, and create objects in the overlay layer based on coordinate information to your applications.
