This is a GPL script to cleanup space hogging cache files created by The GIMP. GIMP uses these files for picture previews. They are not used for anything else and are left on your hard drive after exiting The GIMP. If you value your privacy, or use The GIMP a lot and have lots of these cache files cluttering up Inodes, save yourself some diskspace with this script. The script also allows for pre-testing for the files, so you can see how many of these cache files you have and how much disk space you'd save, without deleting anything.
