Google Sets Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The google sets script from Sooksoft is ColdFusion-based and utilizes Google's BETA tool called Google Sets. This script returns a list of relevant and synonymous keywords based on your initial list of only 1-5 keywords. Google Sets script parses and formats the results in single and comma delimited list forms so that you can easily integrate the results into a database or futher manipulate them yourself.
