

# Half-Life Server List

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Designed with GSP's, this will show the live status of a single or many servers. It supports all Half-Life based mods, but popular examples are: CS (counter-strike), DOD (day of defeat), and NS (natural-selection) Its simple in design, and easy to customise to your site needs. It has file based caching, which stops excessive querying, and yet requires no SQL. With the use of the Cron feature, the CSV cache file can be used to feed other scripts, such as front page status stats. Live demo setup available to view on the download site.
