

Highlighter Component

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Highlighter is .NET component that changes format of wanted words and phrases, to make them more notable in text on web page (e.g. for search results). You can change anything you can imagine, including font size, color, bold, italic, underline, background color etc., or simply use css styling. Features & Benefits: Developers: Add highlighting features to your ASP or ASP.NET application in no time with this easy to use component. Just add your terms and choose the look that best suite to your existing design. You can format all words to the same format or specify different formats if you need it. Your business: Improve your web site and make it more intuitive for your customers. If your web page has a lot of text, it could be confusing for your vistiors to find what they want. That can be crucial in making decision of purchasing, enroll or next visit to your site.
