

# Hit Counter (DB)

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This is an ASP counter script that uses a database to store the counts so it's really pretty easy to maintain multiple counts using this one file. All you need to do is include it into your asp file and it'll do the database work and print out the count for that file. It even automatically adds records when a page is first hit.
