

HPFind

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

HPFind is a small Perl script that allows you to find files in users' directories and displays them in a table on an html page. This version looks for index.htm and index.html in ~/public_html, but can be set to search for any file. It also allows you to configure the output text and background, and exclude a given list of users.
