Custom HTML5 and jQuery Audio Player that brings a uniform look throughout all web browsers. Just add an audio tag with class named HTML5AudioPlayer and initialize the plugin, it's that simple. It has also a flash fallback if user system doesn't support HTML5 audio tag. Responsive, the player works on multiple platforms. Fully customizable, almost all control buttons can easily be turn on or off. Fully skinnable, the appearance is fully customizable with CSS. Multiple instances, the player can be included multiple times on the same page. There are 6 different themes included. The CSS is highly compatible with your site's existing code. Autoplay support, the audio should start playing as soon as it is ready. Loop support, the audio should start over again, when it is finished. The volume state will be saved with local storage or cookies. Support for legacy browsers with an automatic Flash fallback. Cross browser support. Public API to control the audio player externally.
