<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This HTML5 music player is great for anyone who needs their music to work on both desktops and mobile devices. It has three CSS3 based skins to choose from and comes with a custom built Flash fallback for older browsers that don't support HTML5 Audio. Use it as your page's main music player, add it to your blog posts or build on top of it with the available API methods. The player is custom built on top of jQuery 1.7.1 and is void of any external open source media plugins (keeping it super-optimized and light-weight). Custom Settings Include: Choose from three CSS3 skins Start the player in an open or closed state Choose to autoplay music Randomize the song order Set the volume level Add custom HTML for song titles
