Mobile Number	{value_mobile_number}
Email	{value_email}

htmlArea is a free WYSIWYG editor replacement for common textarea fields in HTML forms. Users can change the font size/color, make it bold/italicized/underlined, add bullets numbering, and tables, insert images and links, and more. It works with any server-side software that accepts forms, including PHP, ASP, Perl, etc and enables users to format their content as easily as if they were using a Word Processor. No HTML knowledge is required. Once the form is submitted, the raw HTML is passed along through your CGI script for use in your program. Open source license.
