IDIA (Perl)

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

IDIA creates a static way of communicating with computers which have been assigned dynamic IP addresses. In other words, idia makes it possible for the public to access your computer as a game, web, ftp, mail, or news server via one permanent internet address. This script is available for PHP and Perl completely free of license restrictions.
