<b>Email</b>	{value_email}

Use this software to generate banners or other images on-the-fly, using JavaScript and PHP. It's experimental and still in an early stage of development, but it offers some nice features already: \* Image size and background color can be modified. \* All image contents are treated as objects that can be modified separately. \* Supports 5 different object types: text, ellipse, triangle, rectangle and image. \* Contains 14 fonts. \* Size, background/line color and opacity of objects can be modified. \* Horizontal and vertical margins/alignments of objects can be modified. \* Supports object rotation.
