ImageProperties .NET

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

ImageProperties .NET control reads and writes a comprehensive range of meta data from image files. This includes many EXIF types and image properties like Resolution and Color depth, Author, Title, Comments, photo properties like Creation date, Camera model, Shutter ISO-speed, Flash mode and a lot of other standard and some software or camera manufacturer-specific properties. The information stores in file and moves with the file so you never need to worry about losing it.
