

## Include E-mail

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This script is a handy utility for the person who gets around a lot. This is simply an E-Mail form on a page within a protected directory of your Web site. You just need to fill in an address (which the program checks to ensure is in valid format) and a subject, then the text. Presto! Your E-Mail is sent and you did not need to be at your computer to access your E-Mail client or at a computer which allows you to even send e-mails. One of the great boons to this is that your E-Mail has your return address and does not have the sometimes questionable addresses.
